

rials (Helimskii 1986). Fortunately, however, a partial paradigm of one verb, "to stand", is recorded in Pumpokol materials (Helimskii 1986: 211):

itscha-dingdi "I stand"
 úe-itscha-dingdu "you (sing.) stand"
 ádu-itschá-dingdu "s/he stands"
 ádyng-it-scháding-dun "we stand"
 ánjang-it-schádingan "you (plur.) stand"

It is very difficult to offer a proper morphological analysis of this paradigm due to the scarcity of Pumpokol materials, but several possibilities can be suggested. The subject agreement markers are probably *-di*, 1ps, *-du* 2ps & 3ps, *-dun* 1pp, and *-an* 2pp. Among those, only plural suffixes have parallels in the Kott and Proto-Yeniseian system: 1pp *-dun*, PY **-3eŋ* (Kott *-toŋ*), and 2pp *-an*, 2pp **-[k]oŋ* (Kott *-oŋ*). The verbal root is probably *-ding-* (Starostin reconstructs PY **d[i]k-* "to stand" (1995: 221), cf. such Arin forms as *at'aŋ xet'aŋ*, *aj xet'aŋ* "I stand"; *xet'aŋtaŋ*, *aiŋ (itaŋ) xet'aŋtaŋ* "we (they) stand"; *axorent'a:ŋ*, *aŋ axorent'a:ŋ* "you (pl.) stand" (Toporov 1968: 286–287). The initial *úe-* in *úe-itscha-dingdu* "you (sing.) stand" is probably just the independent second person singular pronoun, cf. Ket *u*, *uk* "you" (sing.) (Kreinovich 1968b: 461), Yug *u*, *uk* "you" (sing.) (Kreinovich 1979: 336), possibly also Arin *au* "you" (Toporov 1968: 287). The initial *ádu-* in *ádu-itschá-dingdu* "s/he stands" is also probably the independent third person singular pronoun, cf. Arin *xatu* "he" (Toporov 1968: 292). The same can be said about *ádyng-* in *ádyng-it-scháding-dun* "we stand", which be compared to Ket *ʌt'n'* and Yug *ʌt'n* "we" (Kreinovich 1968b: 461; 1979: 336). The initial *ánjang-* in *ánjang-it-schádingan* "you (plur.) stand" is likely to be the third person plural pronoun, too, but there are no obvious external parallels. The rest of the form, namely *-itscha-*, is unclear, at least to me, who is not a Yeniseian specialist.

In spite of an obvious poor quality of the recording, it is possible to see that Pumpokol, like Kott and unlike Ket, has subject verbal agreement suffixes at the end of the verbal forms. That, alongside with the fact that the Arin language has a system similar to Kott and Pumpokol, is favorable evidence for Georgii Starostin's reconstruction of Proto-Yeniseian subject verbal agreement
